

Magnetic Capsule Maze Cup

Steer a pill-camera without touching it

At a glance: Steer a magnetic pill-camera through a body maze without touching it. Plan about 80 minutes for the core block; 4 to 6 teams of 4 to 5 students.

LEARNING OBJECTIVES

By the end of this activity, each student can:

- Explain the core science of this challenge: magnetism, remote actuation, biomedical technology, path planning (Understand).
- Design a fair test by controlling one variable while holding others constant (Apply).
- Use their own data to decide whether a redesign improved the result (Analyze).
- Defend a final claim with specific evidence (Evaluate).

MATERIALS FOR 25 STUDENTS AND 6 TEAMS

- small neodymium magnets
- maze boards
- steel tokens or paper clips
- timers
- barrier sheets

PREP BEFORE STUDENTS ARRIVE (15 TO 20 MIN)

- 1 Set up one station per team with the materials above, sorted and ready.
- 2 Stage the scoring sheet and any reference values before testing begins.
- 3 Put out PPE (gloves, goggles, trays) before any materials are handled.
- 4 Load the activity slides and ready the projected timer.

MINUTE-BY-MINUTE FACILITATION

Phase 1 Hook 0:00 - 0:05

Pose the mission as a challenge: "Steer a magnetic pill-camera through a body maze without touching it." Take a quick prediction by show of hands.

Phase 2 Prediction 0:05 - 0:12

Before any materials move, each team writes one prediction and one reason on the handout. No building yet.

Phase 3 Constraints 0:12 - 0:18

Set the rules: approved materials only, change one variable at a time, record at least one data point before any redesign, and follow the safety notes.

Phase 4 Build or solve 0:18 - 0:44

Teams work through the steps on the student handout. Circulate, ask what they are testing, and resist solving it for them.

Phase 5 Test and record

Teams run the standard test and log a baseline result before changing anything.

Phase 6 Redesign

Each team changes exactly one variable, predicts the effect, and re-tests to compare against baseline.

Phase 7 Score, debrief, cleanup last 12 min

Teams submit a score slip, answer a debrief question with evidence, and reset the station. PPE off, wash or wipe down.

TROUBLESHOOTING

Problem: A team changed several things at once. **Fix:** Have them reset to one variable before the next reading counts; treat it as a data-quality coaching moment.

Problem: No measurable result on the first test. **Fix:** Check the setup against the steps, confirm the standard test was followed, and log the baseline anyway.

Problem: Readings vary between trials. **Fix:** Standardize the procedure: same conditions, same technique, average several trials.

Problem: A team finishes early. **Fix:** Push the extension prompt below and ask them to quantify their improvement.

DIFFERENTIATION: THREE-TIER SUPPORT PROMPTS

Tier 1 (stuck at the start):

- "What is the one science idea behind this challenge?" Point them to remote actuation.

Tier 2 (building but not reasoning):

- "What single change could improve your result without changing anything else?"

Tier 3 (ready to extend):

- "Run a second version that isolates a different variable and compare the two with data."

DEBRIEF QUESTIONS (PICK 2 TO 3)

- Why does moving the magnet slowly help?
- How does distance change the pull you feel?
- Where is remote actuation used in real medicine?

SCORING RUBRIC (100 POINTS)

Scoring criterion	Points
Fastest clean run	50
Low penalties	20
Magnetic-control explanation	20
Redesign	10
Total	100

CLEANUP AND SOURCES

Return reusable items to the bin, dispose of consumables, wipe surfaces, and collect score slips.
