INSTRUCTOR GUIDE PACKET

Facilitation guides for every primary and backup activity.

IN THIS PACKET

TTT-01 MudWatt Bioelectric League

TTT-02 Forest Sensor Sprint

TTT-03 Seed Dispersal Derby

TTT-04 Xylem Pipeline Relay

TTT-05 Greenhouse Climate Controller

TTT-06 Pinecone Weather Machine

TTT-07 Pollinator Network Draft and Build

TTT-08 Arboretum Eco-Quest

TTT-09 Minecraft Tree World Resilience Cup

TTT-10 Tree Ring Climate Detective

TTT-11 Lotus Leaf Surface Sprint

TTT-12 Leaf Stomata Microscope Detective

TTB-01 Root Grip Erosion Rescue

TTB-02 Tree Height Triangulation Shootout

TTB-03 Urban Heat Shade Dash

TTB-04 Photosynthesis Float-Off Playoffs

MudWatt Bioelectric League

Turn a cup of mud into a living battery

At a glance: Can your team make mud generate electricity and defend your design with data? About 80 min; 4 teams.

MATERIALS

- 4 DIY soil microbial fuel cells: clear deli container, pond mud, two 4×4 in carbon-felt electrodes each (plus 1 spare set)
- measured sugar cubes as fuel (one per cell per run, plus spares)
- 4 multimeters, one per team, plus 2 spare (confirm battery type and that a battery is included)
- 100 kΩ resistors and alligator-clip lead wires, one set per cell
- nitrile gloves and a containment tray per station
- labels and masking tape
- handwashing supplies

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which design change moved your readings the most, and how do you know?
- Why must the anode stay buried and the cathode stay in air?
- How is your weekly log like the work of an energy engineer?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Peak voltage reading	35
Daily data log quality	20
Controlled-variable design	15
Redesign or maintenance plan	15
Final explanation	15
Total	100

SOURCES soil microbial fuel cell electrode and voltage references (carbon-felt anodes; terrestrial MFC literature on 300 to 600 mV output as the biofilm matures).

PRINT: TTT-01 DAILY VOLTAGE LOG

One per team, on cardstock (or a sheet protector for dry-erase). Each day, set the multimeter to DC millivolts and read the voltage across the 100 kΩ resistor at the same time; the cell is weak on day 1 and climbs as the biofilm grows. Defend the design with the trend, not one number.

Daily voltage log

Team _____ The ONE variable we are testing _____

DAY	TIME	VOLTAGE (mV)	NOTES
Mon Jun 22			
Tue Jun 23			
Wed Jun 24			
Thu Jun 25			
Fri Jun 26			
Peak reading		Day of peak	

Forest Sensor Sprint

Site the smartest place for a campus tree sensor

At a glance: Find the smartest place to install a future campus tree sensor. About 80 min; 4 teams.

MATERIALS

- 4 clipboards plus spares
- 4 paper clinometers plus spares
- 4 combined temperature + humidity meters (one device, plus spares)
- 4 three-in-one soil meters (moisture, light, pH), one per team, plus spares
 - 1 to 2 long tape measures (pre-mark a fixed standoff distance in prep)
- 4 route cards (one per team) plus 2 spares
- pencils

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which measurement most influenced your choice?
- Where did two nearby spots disagree, and why?
- What would change your recommendation in winter?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Data accuracy	30
Route efficiency	20
Site recommendation evidence	30
Teamwork and field conduct	20
Total	100

SOURCES GLOBE Observer Trees; NASA MyNASAData Urban Heat Island

Paper clinometer

Cut along the flat top edge and the curved outline.

ASSEMBLE

- 01 Cut out the half circle along the curved outline.
- 02 Tape a straight straw along the top straight edge.
- 03 Punch the center dot, thread a string through it, and tie a washer or paper clip on the end as a weight.
- 04 Sight the treetop through the straw, let the string hang free, then pinch it against the scale and read the number.
- 05 Self-check: sight something level (reads 0) and straight up (reads 90).

FIND THE TREE HEIGHT

Tree height = eye height + (distance to the tree $\times$ tan of the angle). Use the standoff distance the instructor marked.

ANGLE	TAN
10	0.18
20	0.36
30	0.58
40	0.84
45	1.00
50	1.19
60	1.73
70	2.75

Example: eye height 1.5 m, distance 10 m, angle 40° gives $1.5 + 10 \times 0.84 =$ about 9.9 m.

Team route card

From Trees to Tech · TTT-02 Forest Sensor Sprint · Team Route Card

Team _____ Date _____

Plan an order that avoids backtracking, take a reading at each checkpoint, then recommend the best sensor site using your numbers.

CHECKPOINT	VISIT ORDER	TEMP (°F)	HUMIDITY (%)	LIGHT (RELATIVE)	SOIL MOISTURE (1 TO 10)	NOTES
Reference (calibrate)						
A						
B						
C						
D						
E						

Our recommended sensor site: _____

Why (use your data): _____

The checkpoints are the spots the instructor marked outside.

cut here

E						

Our recommended sensor site: _____

Why (use your data): _____

The checkpoints are the spots the instructor marked outside.

One per tree, on cardstock (lamine; it sits on the ground). Place it at the distance you pre-mark from the tree base with the long tape.

FROM TREES TO TECH 2026 • TTT-02

Tree-height station

Stand here

*Sight the treetop through your clinometer
straw from this mark.*

This mark is a measured distance from the tree base.
Write that distance here: _____ m, then use it in
your tree-height formula.

Seed Dispersal Derby

Engineer a seed that escapes its parent tree

At a glance: Build a seed that escapes the parent tree without engines or throwing. About 80 min; 4 teams.

MATERIALS

- paper
- cardstock
- paper clips
- masking tape
- string
- fan or marked test lane
- a shared tape measure for distance
- timers

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which change improved hang time without losing distance?
- Why does spinning slow the fall?
- Which tree's strategy did your final seed copy?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Distance traveled	35
Hang time	25
Target landing	15
Biomimicry explanation	15
Redesign improvement	10
Total	100

SOURCES Science Buddies Seed Dispersal; Project Learning Tree

PRINT AND CUT: TTT-03 FLOOR SCALE AND TARGET

Print at 100% (not "fit to page") on cardstock so the centimeter ruler stays true to size. Tape the strip flat down the lane with the **0** end at the launch line; for a longer lane print several strips and tape them head to tail.

Drop-lane distance strip

Landing-zone target

Lay the target flat where staff pick down the lane and line the crosshairs up with the lane center. A higher ring number is a better landing.

Ring 1

Outer ring. Your seed touched the target.

Ring 2

Good aim. Getting closer.

Ring 3

Close to the center.

Ring 4

Bullseye, right on the dot.

Xylem Pipeline Relay

Move water uphill the way a tree does

At a glance: Move water uphill like a tree, faster and cleaner than rival teams. About 80 min; 4 teams.

MATERIALS

- paper towels
- cotton string
- felt strips
- cups
- food coloring
- trash bag table cover
- rulers
- elevation blocks

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which material moved water best, and why?
- How did slope change your delivery?
- Where does a real tree use this same effect?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Water delivered	40
Speed	20
Least spill	15
Design explanation	15
Redesign gain	10
Total	100

SOURCES Science Buddies; plant water transport references

Greenhouse Climate Controller

Match plants to the right climate zone

At a glance: Run the greenhouse controls for a plant that cannot complain, only wilt. About 80 min; 4 teams.

MATERIALS

- plant profile cards
- control dial boards
- clipboards
- dry erase markers
- tour clue sheets

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which plant was hardest to place, and why?
- What tradeoff did you have to accept?
- How do real growers handle conflicting needs?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Correct setting choices	30
Use of tour evidence	25
Explanation	20
Layout efficiency	15
Teamwork	10
Total	100

SOURCES Temple Ambler Greenhouse

From Trees to Tech 2026 · TTT-05 Greenhouse Climate Controller

Plant profile cards

Each card says what one plant needs. Match it to the greenhouse zone whose tour readings fit, then defend the placement with a clue from the tour.

Fern

TEMP  cool to warm, 16 to 24 °C (60 to 75 °F)

HUMIDITY  high, 50% or more; likes damp air

LIGHT  shade or bright indirect; never direct sun

WANTS Damp air and shade, like a forest floor.

AVOID Direct sun and dry air crisp the fronds.

Moth orchid

TEMP  warm, 24 to 29 °C (75 to 85 °F) by day, above 16 °C (60 °F) at night

HUMIDITY  humid, 50 to 80%, with some air movement

LIGHT  medium; bright but filtered, no direct beam

WANTS Warm, humid air and bright, filtered light.

AVOID Full direct sun scorches the leaves (the orchid-loves-sun myth).

Cactus

TEMP  warm days, big day-to-night swing, 24 to 34 °C (75 to 90 °F)

HUMIDITY  low; dry air and fast-draining soil

LIGHT  very high; full, direct sun

WANTS Hot, bright, dry air like a desert shelf.

AVOID Damp, shady air rots the roots.

How to read a card

The thick black bar on each scale is the plant's happy range.

TEMP
10 to 40 °C.

HUMIDITY
0 to 100%.

LIGHT
shade on the left to full sun on the right. A plant in the wrong zone tells you how it suffers: too dry wilts, too bright scorches, too damp molds.

From Trees to Tech 2026 · TTT-05 Greenhouse Climate Controller

Control dial board

Set each dial for the plant you are placing, then record where each plant goes and the tour clue that backs it.

TEMPERATURE (°C)

HUMIDITY (% RH)

LIGHT

Placements: defend each one with a tour clue

PLANT	ZONE YOU CHOSE	TEMP	HUMIDITY	LIGHT	TOUR CLUE THAT SUPPORTS IT
Fern					
Moth orchid					
Cactus					

From Trees to Tech 2026 · TTT-05 Greenhouse Climate Controller

Tour clue sheet

As you tour, record what you see, feel, and hear for each zone: warm or cool, damp or dry, bright or shaded, plus any reading the docent points out. Back at the table this is your evidence for matching plants to zones.

GREENHOUSE ZONE	TEMPERATURE	HUMIDITY (DAMP/DRY)	LIGHT (SHADE/BRIGHT)	WHAT THE DOCENT SAID / EVIDENCE
Main greenhouse				
Hoop house				
Shaded bench				
Bright bench				

Tip: you do not need exact numbers. "Warmer and more humid than the hoop house" is good evidence. Use the control-system or weather-station readout if the docent shows one.

Pinecone Weather Machine

A humidity sensor with no battery and no code

At a glance: Build a weather sensor with no battery and no code. About 80 min; 4 teams.

MATERIALS

- dry pine cones
- index cards
- wood skewers
- spray bottles
- rulers
- masking tape
- paper fasteners

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Why does a two-layer strip bend when only one layer swells?
- What made your indicator faster?
- Where would a no-power humidity sensor be useful?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Response accuracy	35
Response speed	20
Readable output scale	20

Redesign quality	10
Total	100

SOURCES AskNature Pine Cones Strategy

Pollinator Network Draft and Build

Design a habitat that works all season

At a glance: Draft a pollinator habitat that works all season, not just on the prettiest day. About 80 min; 4 teams.

MATERIALS

- plant cards
- pollinator cards
- grid boards
- stickers
- markers
- season tokens

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Where was the biggest gap in your bloom calendar?
- Why does clumping help pollinators?
- What happens to the network if one season is missing?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Seasonal coverage	30
Pollinator fit	25
Native and clumping logic	20
Layout clarity	15
Defense	10
Total	100

SOURCES USDA Pollinators; US Forest Service pollinator guidance

Arboretum Eco-Quest

Solve outdoor ecology checkpoints

At a glance: Read the living collection and solve the checkpoints before time runs out. About 80 min; 4 teams.

MATERIALS

- clue cards
- route map
- clipboards
- pencils
- evidence token bags
- optional QR codes

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which clue was most reliable for telling trees apart?
- Where did a key send you wrong, and why?
- What makes a good piece of field evidence?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Checkpoint accuracy	50
Evidence quality	20
Pace	20
Teamwork and conduct	10
Total	100

Minecraft Tree World Resilience Cup

Design a climate-resilient landscape

At a glance: Design a landscape that survives stress because of how it is built, not luck. About 80 min; 4 teams.

MATERIALS

- Minecraft Education devices and template or paper grid kit
- rubric cards
- display timer

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which feature would help most in a real storm?
- Why does diversity add resilience?
- What in your build would fail first, and how would you fix it?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Resilience features	30
Biodiversity support	25

Tree Ring Climate Detective

Read rings to reconstruct past climate

At a glance: Read the rings to reconstruct the climate events a tree lived through. About 80 min; 4 teams.

MATERIALS

- printed ring cards
- wood cookies or images
- answer boards
- timers
- claim-evidence cards

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Which pattern was easiest to misread?
- How is a tree ring like and unlike a thermometer?
- What other natural records store past climate?

SCORING (100 POINTS)

Lotus Leaf Surface Sprint

Engineer a self-cleaning, water-shedding surface

At a glance: Build a surface that sheds water and dirt the way a lotus leaf does. About 80 min; 4 teams.

MATERIALS

- wax paper
- cardstock
- sandpaper strips
- masking tape
- pipettes
- water
- pepper or cocoa residue
- ramps

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Why does a rough, waxy surface shed water better than a smooth one?
- What carried the dirt away?
- Where would a self-cleaning surface be useful?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Fast clean runoff	35
Least residue	25
Surface design explanation	20
Redesign gain	10
Craftsmanship	10
Total	100

SOURCES AskNature Lotus Leaf Self-Cleaning Surface

Leaf Stomata Microscope Detective

Count stomata and rank leaves by water strategy

At a glance: Count the breathing pores and rank leaves by how they manage water. About 80 min; 4 teams.

MATERIALS

- leaf samples
- clear tape
- clear nail polish or prepared slides
- USB microscopes or magnifiers
- grid sheets
- gloves

FACILITATION ARC

- Hook and prediction: pose the mission, teams write one prediction and reason.
- Constraints: approved materials, one variable at a time, record before redesign.
- Build or solve, then run the standard test for a baseline.
- Redesign one variable, re-test, compare to baseline.
- Score, debrief with evidence, reset the station.

DEBRIEF

- Why count several fields instead of one?
- What does a high stomata count suggest about a leaf's habitat?
- Where might error sneak into your count?

SCORING (100 POINTS)

SCORING CRITERION	POINTS
Slide or peel quality	25
Counting accuracy	30
Ranking evidence	25
