

Route mat (24 addressed bins)

Use per-team copies for planning, then one shared tabletop mat for judging. Rows are lettered A to D and columns numbered 1 to 6, so every bin has an address like **B3**. Place items by ADDRESS, not by subject — that is how an automated storage and retrieval system finds a book fast.

DEPOT ONE MOVE TO A1	A1	A2	A3	A4	A5	A6
	B1	B2	B3	B4	B5	B6
	C1	C2	C3	C4	C5	C6
	D1	D2	D3	D4	D5	D6

Judging rules: Start and finish at DEPOT. One legal move goes between orthogonally adjacent bins (up, down, left, or right; never diagonal) or between DEPOT and A1. Retrieve a requested address when the pointer reaches it. Route cost is the total number of legal moves; a missed address or illegal jump makes the run incomplete. One team runs the shared judging mat at a time.
