

Route map and field log

Before teams leave: the instructor marks the safe walking boundary, start, finish, and any no-go areas on every copy. Teams then map matched sunny and shaded surfaces, draw the direct path with a dashed line, and draw their cooler route with a solid line.

Team _____ Date/time _____ Sky: sunny / mixed / cloudy

FIELD MAP – LABEL MEASUREMENT STOPS 1 TO 4

N

Sketch buildings, paths, trees, shade, and safe boundaries here

S/E instructor-marked start and finish 1-4 paired measurement stops /// shade Δ tree □ building
- - - direct path — cool corridor

MATCHED SURFACE TEMPERATURES

#	SAME SURFACE TYPE	SUN °F / °C	SHADE °F / °C	GAP
1				
2				
3				
4				

At each stop, compare the same surface type from the same distance. Circle one unit and use it throughout.

ROUTE EVIDENCE

Hottest point on the direct path: _____

Hottest point on our cool corridor: _____

Our route reduces peak surface temperature by: _____

Distance or convenience tradeoff: _____

Evidence sentence: _____

Field safety: stay with your buddy, remain inside the marked boundary, walk, hydrate, and aim the IR thermometer at surfaces only — never at eyes.
