

Glide test, target rules, and scoring target

Glide test (Glide performance, 30 points)

- 01 Tape a start line and a launch line 30 cm apart on a smooth floor or long table.
- 02 Set the inflated hovercraft on the start line, open the cap, and give it one firm, level push so it crosses the launch line.
- 03 Measure how far past the launch line it glides before it stops. Record the **best of three** pushes in centimetres.
- 04 After every team finishes, record the field-best distance. Glide points = $\text{round}(30 \times \text{your best distance} \div \text{field-best distance})$, capped at 30. If no puck crosses the line, every team earns 0 glide points.

Target hockey (Target competition score, 25 points)

- 01 Place the target sheet 1 to 1.5 m from a shooting line on the floor.
- 02 Each team gets **five shots**: push the hovercraft from the shooting line so it comes to rest on the target.
- 03 Score the ring the puck's centre stops on (5, 10, 20, or the 30 bullseye). Off the target scores 0. Add the five shots for a raw total out of 150.
- 04 Target competition points = $\text{round}(\text{raw five-shot total} \div 6)$, capped at 25. Record this converted value on the 100-point rubric.
- 05 Run it as a bracket: highest five-shot total advances. Ties take one extra shot.

SCORING TARGET
