

# Stomata counting sheet

Everyone counts the same way, then ranks the leaves by how they manage water.

COUNTING CONVENTION

- Count every stoma **fully inside** the field of view.
- Do at least **three fields** per leaf.
- Average the three counts for that leaf.

| LEAF                          | FIELD 1 | FIELD 2 | FIELD 3 | AVERAGE |
|-------------------------------|---------|---------|---------|---------|
| Leaf 1<br>name/type:<br>_____ |         |         |         |         |
| Leaf 2<br>name/type:<br>_____ |         |         |         |         |
| Leaf 3<br>name/type:<br>_____ |         |         |         |         |
| Leaf 4<br>name/type:<br>_____ |         |         |         |         |

Our ranking, water-saving to water-spending (use the averages; more stomata generally means more water lost):
