

Ring cards

These six stylized cards use an authored practice code: relatively wide = model-favorable, relatively narrow = model-stress, and a black mark = model-disturbance. Read annual bands from pith to bark. Each annual ring contains earlywood and latewood; alternating gray and white only separates adjacent years. This code is not a universal rule for real trees.

CARD A

center (pith) on the flat edge, bark on the curve

CARD B

center (pith) on the flat edge, bark on the curve

CARD C

center (pith) on the flat edge, bark on the curve

CARD D

center (pith) on the flat edge, bark on the curve

CARD E

center (pith) on the flat edge, bark on the curve

CARD F

center (pith) on the flat edge, bark on the curve

Answer board

For each stylized card, record what you see, the model event assigned under the authored code, and the exact annual bands that support it. Read from the center out. A card cannot reconstruct real climate.

CARD	OBSERVED WIDTH / MARK PATTERN	MODEL EVENT UNDER CARD CODE	ANNUAL BANDS THAT SUPPORT IT
Card A			
Card B			
Card C			
Card D			
Card E			
Card F			

Claim-evidence cards

Use one card for each model event assigned under the authored practice code. Point to exact annual bands and explain how they support the model. Real climate claims require cross-dated samples and local calibration.

CLAIM, EVIDENCE, REASONING

Card: ____ Model event under the card code:

Evidence (which annual bands):

Reasoning (how the bands support the model assignment):

CLAIM, EVIDENCE, REASONING

Card: ____ Model event under the card code:

Evidence (which annual bands):

Reasoning (how the bands support the model assignment):

CLAIM, EVIDENCE, REASONING

Card: ____ Model event under the card code:

Evidence (which annual bands):

Reasoning (how the bands support the model assignment):

CLAIM, EVIDENCE, REASONING

Card: ____ Model event under the card code:

Evidence (which annual bands):

Reasoning (how the bands support the model assignment):
