

Stomata counting sheet

Compare stomatal density with one standardized method. Counts alone cannot rank actual water use.

COUNTING CONVENTION

- Keep leaf surface, preparation, magnification, and field area the same.
- Count every stoma **fully inside** the field.
- Count at least **three fields** per leaf.
- Report the **mean and range**.

LEAF	FIELD 1	FIELD 2	FIELD 3	MEAN	RANGE
Leaf 1 name/type: _____					
Leaf 2 name/type: _____					
Leaf 3 name/type: _____					
Leaf 4 name/type: _____					

Density comparison and cautious hypothesis: _____

Counts alone cannot rank water use. What aperture, pore-size, gas-exchange, species, or condition evidence would you need? _____
