

Route mat (tape to a table; 24 addressed bins)

Print landscape and tape down, or copy the grid onto a table with painter tape. Rows are lettered A to D, columns numbered 1 to 6, so every bin has an address like **B3**. Place items by ADDRESS, not by subject — that is how a library BookBot (an automated storage and retrieval system) finds a book fast.

A1	A2	A3	A4	A5	A6
B1	B2	B3	B4	B5	B6
C1	C2	C3	C4	C5	C6
D1	D2	D3	D4	D5	D6

Aisle rule: only one team "crane" in a column at a time. Plan a route that fills an order with the fewest column changes and no collisions.
